

Dear Colleagues,

Renewable energy and sustainability community,

It is our pleasure to invite you to take part in "GREENTECH", the first annual renewable energy and sustainability conference and exhibition to be held on Tuesday, September 13th, 2022, at the Ramada Hotel, Jerusalem. Energy innovation communities, in Israel and around the world, are increasing their activity. The majority of these activities are directed towards green energy, which is expected to fulfill forecasts for reducing fuel combustion and atmospheric pollution. Statements of the leaders and designers of the green energy production programs in the coming decades rely mainly on shelf technologies, which will find it difficult to meet the stated challenges, this will require new developments and improve existing technologies.

The conference on renewable energy and sustainability will be held for the first time in Jerusalem with sponsorship from the Azrieli College, the Academic College of Engineering and the Green Energy Center, which was recently established.

The conference will be held at the Ramada Hotel on Tuesday, September 13th, 2022, and will be dedicated to technologies that are in development at various stages by academic institutions, industrial companies, policymakers and legislators.

Our call is directed to academia, industries, energy companies for investment and the establishment of green energy production sites, government ministries entity engaged in the field.

Among the topics included in the conference plan:

- Types of green energy production: solar, wind, hydraulic waves and others.
- Developing technologies for savings and optimal management of energy.
- Technologies for environmental conservation and treatment of pollutants.
- Demonstration sites and experimental laboratories in the fields of energy production and environmental conservation.
- Design, management and control technologies for distributed energy sites.
- Energy storage and transmission.

We look forward to seeing your participation in this important conference.

Best Regards,

Dr. Moshe Zilberman, Conference Chairman
